DROOMS FEATURES

OCR (Optical Character Recognition) Search

Our OCR-based full-text search simplifies data room navigation by enabling quick, comprehensive searches of document content. Instead of manually searching through folders, users can search keywords, filter by document or folder names, and navigate through highlighted text matches within each document.

Key highlights are:

> **Comprehensive search:** Search across the entire data room for any keyword, with results organised based on their position within the data room structure

> **Flexible filtering:** Simultaneously apply filters such as *"Search by title"* to limit results to folder and document names only.

> **Precise navigation:** Each search term is highlighted in the document, allowing for easy browsing from one match to the next.

> **Document management filters:** Use additional filters for pending files, user-uploaded files, and unconverted files for targeted file management.

drooms

> **Enhanced efficiency:** Streamline review processes, reduce search time, and keep all document discovery within the data room.

With OCR search, uncovering critical information has never been faster or more intuitive, making every document and detail instantly accessible right when you need it.
