

## **Excel Viewer**

- The Excel Viewer feature, an alternative to the regular document viewer, can be activated upon request and enabled per data room.
- When switched on, Excel sheets can be viewed and read directly in detail. Gone are the days of needing to worry about pre-set printing areas.
- The feature also allows the viewing of formulas, as well as the possibility to navigate between different sheets of an Excel file.
- Users can enjoy the flexibility of switching between Excel view and document view at any time using a toggle button.
